

Soccer Tournament Dashboard - User Stories

Sprint 2 - Tournament Selector & Group Standings

As a user, I want to select a tournament so that I can view data specific to that competition.

As a user, I want to view group standings so that I can see team rankings.

As a user, I want standings to reflect real tournament data so that rankings are accurate.

As a user, I want a pre-tournament state so that the UI is usable before matches begin.

Sprint 3 - Match Schedule

As a user, I want to view matches grouped by date so that I can easily browse fixtures.

As a user, I want to see live match updates so that I can follow ongoing games.

As a user, I want the app to still work if the API fails so that I am not blocked.

Sprint 4 - Team Profile & Global Search

As a user, I want to view a team's profile so that I can see details about them.

As a user, I want to navigate to a team from other views so that exploration is seamless.

As a user, I want to search for teams and players so that I can quickly find them.

As a user, I want to filter search results so that I can narrow results.

As a user, I want fast search results so that the app feels responsive.

Sprint 5 - Player Stats & Background Jobs

As a user, I want to view player rankings so that I can see top performers.

As a user, I want to filter players so that I can view relevant subsets.

As a user, I want player stats to be up-to-date so that rankings are accurate.

As a developer, I want to manually trigger refresh jobs so that I can debug data issues.

Sprint 6 - Knockout Bracket & Polish

As a user, I want to view the knockout bracket so that I can track tournament progression.

As a user, I want to see placeholder data before knockout stage begins so that the UI remains consistent.

As a user, I want consistent performance so that the app feels reliable.

As a developer, I want observability in place so that I can debug issues.

As a user, I want the app to handle errors gracefully so that it doesn't break my experience.
